

# PROJECT PROFILE

SPECIAL EDITION PROJECT PROFILE FOR THE NEW  
PACKAGING FOR POWERPLY ENDURE BIO ADHESIVE TF

## POWERply Endure BIO Adhesive TF - New Set (Self-Contained) Packaging

### PROJECT DESCRIPTION

WTI Field Resources Supervisor David Pinckney worked with RoofTech while installing POWERply Endure BIO Adhesive TF. This project was one of the first where Tremco shipped the new packaging for this product, where the Part B curative is supplied inside the same pail in which the Part A is shipped. David Pinckney initially thought the curative had been lost in transit but was pleased to find out the curative was already on the roof!

After learning the curative was packaged inside the pail, David quickly realized the benefits for the contractor and for his own WTI Team. "[This new set packaging] is a good move for Tremco and will help make each project go smoother with less hassles." David also highlighted the following on-the-job benefits for those who are charged with delivering efficient and visually pleasing roofing projects:

- Reduced pre-job stress of assuring both of the correct components (A and B) are on site.
- Cannot miss mixing the curative into the base - it is right on top.
- Mixing area on the roof is less cluttered - further reduces chances of mixing errors
- The plastic pail is much faster to open than a steel pail.

<b>LOCATION:</b>	Bowling Green, KY
<b>COMPLETION DATE:</b>	June/Aug 2020
<b>CLIENT:</b>	Western Kentucky University - Potter Hall
<b>TREMCO PRODUCTS:</b>	POWERply Endure BIO Adhesive TF
<b>ROOFING CONTRACTOR:</b>	RoofTech
<b>TREMCO REPRESENTATIVE</b>	Mike Chadwick
<b>PROJECT TYPE:</b>	Repairs and Restoration

*\*Weatherproofing Technologies, Inc. is an affiliate of Tremco Incorporated and part of the Tremco Construction Products Group.*

David also appreciated the benefits of the new packaging:

- The new screw cap on the curative can eliminates accidental spillage when a lid pops open.
- The plastic 5-gallon pail is easier to crush and dispose of than the steel pails.
- Finally - no steel rust rings on the roof from plastic pails!

These are just a few of the benefits of the new set packaging. As David Pinkney notes, this new packaging simplifies the handling and mixing of POWERply Endure BIO Adhesive TF, while also making it more efficient to clean up the job site and dispose of the empty containers.
